SUMMARY

Dynamic and detail-oriented data analyst with 2 years of experience, skilled in leveraging data-driven insights and generative AI to drive strategic decisions that transform raw data into actionable strategies

TECHNICAL SKILLS

Data Analytics: Power BI, Exploratory Data Analysis (EDA), Data Visualization, ETL, Statistical Analysis

Framework & Databases: LangChain | LangGraph | Pydantic | FastAPI | Qdrant | Postgres | Pinecone

Programming: Python, Java, JavaScript, Angular JS, SQL, Data Cleaning, Data Validation, Feature Engineering

AI and Work: RAG | MCP Server | Playwright | Agentic AI | API Management | LLM | Vector DB | Embedding

Software: Git | GitHub | Cursor | Docker | Claude Code | Codex | N8N | PyTorch | PySpark

EDUCATION

CMR Institute of Technology

Bachelor of Engineering in Information Science and Engineering

July 2024

Bengaluru, Karnataka

EXPERIENCE

Capgemini Information Technology Company.

Associate Data Analyst

December 2024 – Present

Bengaluru, Karnataka

Project Name: IKEA FOOD – Infor M3

- Managed functional operations in **Infor M3 ERP**, overseeing client goods data and documentation processes to ensure accuracy, compliance, and smooth business operations.
- Enhanced the **Infor M3 ERP** system by developing **H5 scripts**, customizing widgets to simplify data detection, and writing optimized SQL queries in **Snowflake** to feed and automate dashboard logic, reducing manual steps, improving efficiency, and ensuring **data accuracy**.
- Collaborated with the development team to optimize ERP efficiency using Java Core, AngularJS, and JavaScript, making system workflows more effective and user-friendly.

Verma Consultancy

Software Developer Intern

February 2024 – August 2024

Project Name: Text-to-SQL

- Built an LLM-powered Streamlit application that converts natural language questions into executable SQL queries for CSV datasets.
- Automated CSV ingestion into SQLite using pandas and SQLAlchemy, including schema extraction, column normalization, and sample-data preview.
- Integrated **LangChain** with **OpenAI** to generate optimized SQLite queries from user prompts and dynamically execute them against uploaded datasets.

PROJECTS

Advo - AI-Powered Legal Practice Workspace

- Built an India-first AI workspace for advocates to manage clients, cases, hearings, action items, legal research, drafting, and structured case analysis in one platform.
- Engineered a document intelligence pipeline using **ABBY OCR**, chunking, OpenAI embeddings, and Qdrant vector search to enable secure, case-aware RAG over scanned legal documents.
- Developed context-grounded legal chat, **citation-based** research, AI drafting, and scenario engines for matters including bail, land disputes, injunctions, family law, cheque bounce, and legal notices.

Dynamic Website-to-RAG Pipeline using Crawl4AI and Supabase

- Designed a Retrieval-Augmented Generation (RAG) pipeline that crawls websites, chunks content intelligently, generates embeddings, and performs vector similarity search to provide context-aware AI responses.
- Architected a scalable, end-to-end AI knowledge system integrating asynchronous web crawling, parallel embedding generation, and pgvector-based **semantic retrieval** to deliver low-latency, production-ready conversational search.
